To whom it may concern:

Record Steel and Construction, Inc. (RSCI) had the privilege of working with Sloan Fencing and Construction on the Enhanced Training in Idaho II & III Design Build construction project for Mountain Home Air Force Base in 2000-2001. RSCI was a member of the Joint Venture CCI/RSCI that successfully completed the project. The project consisted of multiple electronic emitter sites for target location and recognition training. ETI Phase 2 and 3 were located south of Mountain Home Air Force Base in the Saylor Creek Bombing Range which is located in the high desert of the Owyhee Canyonlands. Sloan Fencing was the security fencing contractor for this project. Their work consisted of fencing numerous emitter sites, maintenance areas, and live bombing sites. This project was challenging due to the multiple remote locations and difficult working conditions.

Sloan Fencing proved themselves to be experienced and efficient while working on multiple locations. Their work met or exceeded specifications and they were consistently ahead of schedule. Sloan Fencing had an excellent safety record on the project and worked with us in maintaining the information flow necessary for a project of this size. Sloan Fencing also successfully dealt with multiple environmentally sensitive items like the SlickSpot Peppergrass, Sage Grouse Lekking Habitat, and Archeologically Significant sites. RSCI's project superintendent Tim Scott also enjoyed working with Sloan Fencing and Construction.

RSCI views Sloan Fencing and Construction as a contractor in good standing and one that we would work with in the future.

If you have any questions, you can reach me at (208) 887-1401.

Sincerely,

John Henderson
RSCI
