**To Whom It May Concern**

**Regarding: Sloan Fencing & Construction**

Our firm has recently had the pleasure of working with Sloan Fencing & Construction (SFC) on the Robust Security Consolidation, Ground Based Missile Defense (GMD) Project located at Fort Greely, Alaska.

This \$ 1.5 M contract involved several phases of Security Fence and Gate construction that involved close coordination with the Base Garrison personnel who are charged with maintaining the security of the nations Missile Defense system.

Over 24,500 l.f. of cable reinforced fencing and numerous security gates were removed in phases as over 5,500 l.f. of new 8' security fence was installed including two 24' power K-12 rated crash gates.

To perform this work SFC worked closely with the numerous onsite contractors to ensure that security measures were maintained and that the integrity of the existing utilities was preserved. SFC managed on-site surveying and grading to ensure proper grade tolerances, the fabrication and installation of precast cable anchors, vacuum excavation of fence footings, and the fabrication of custom steel braces. SFC has successfully submitted the proper data required by the contract specifications and has demonstrated their understanding of the scope of work involved with the project.

SFC also has had to work in tight coordination with the Electronic Security System (ESS) contractor to ensure proper installation and functioning of the ESS system and the security fence and gates.

To date all work installed by SFC has been in accordance with the plans and specifications and we are very pleased with the performance of their contract scope. We will gladly work with SFC in the future on any and all fencing and security gate installations.

If there are any questions with regard to the work performed by SFC please contact me at 907-349-6666.
