

**SLOAN**  
SECURITY FENCING

**Project Title and Location** Naco West Primary Border Fence, Tucson Sector Arizona

**Project Type** U.S./Mexico Border Combination Vehicle Barrier/Pedestrian Fencing

**General Contractor** Granite Construction

**Dollar Value** \$1.4 Million

**Start/Completion Dates** Aug. 24 to Nov. 10, 2007

**SSF's Role** Install 2.3 Miles of USACE-Custom Design Border Fence

**Description of Project** Sloan was contracted by Granite Construction to construct 2 miles of anti-vehicle border fencing on an "emergency timetable." SSF mobilized its crew and equipment to the site within three days. Over the course of two weeks, Sloan hired 20 local staff and brought in 20 of its own crew. This fencing utilized heavy-duty I-beam and double layered steel mesh fence design. During the course of construction, Sloan poured over 3,000 yards of concrete in the foundation and posts. As a result of its timely project performance, Granite Construction contracted with Sloan to perform an additional ½ mile of fencing.

**Project Challenges**

- Tight schedules that required significant scheduling and planning
- Complex environmental and archeological issues
- Immediate mobilization of personnel and equipment
- Difficult soils for excavation
- Security concerns, including illegal immigrants/drug runners
- Border patrol coordination
- Hurricane-related weather activity resulting in flash floods
- Limited corridor access to site
